

# Event Preferences (Preference Setup)

Last Modified on 09/11/2019 2:45 am EDT

These settings are normally set during initial [event setup](#) . You are able to come back later and edit most of these settings, with the exception of Event Type, Contact Store, visible Modules, and Office assignments.

Settings you can manage include:

- Details
- Access Rights
- Invoice Header
- Custom Fields

See [Event Setup](#) for complete details on managing and editing the details in Event Preferences.
