Event Website Builder

*This article is about your **event website** – your promotional website. An event website is not interactive – if you're looking for information about creating a registration site, for your attendees, presenters, exhibitors etc to add details and pay online, please see the articles about interactive (registration) sites.*

The Event Website Builder Tool, accessed under Event Website in the Online Panel lets you build a single-page or multi-page responsive Event Website to promote your event or meeting.

You can only have one event website per event.

This drag and drop environment utilizes hundreds of different layout options and automatically creates a navigation menu for your site.

Like the Info Site Builder App, you can insert a block from the EventsAir Agenda, Speakers, Sponsors, and Exhibitor sections and the appropriate information is automatically populated in the Event Website.
