

# Version Info Overview

Last Modified on 01/11/2024 12:56 am EST

The team at EventsAir is committed to creating the most flexible and powerful event management platform in the industry. You are always notified in advance before updates are deployed, and you always have the opportunity to “pin” your current version of EventsAir and delay any updates until you are ready to move forward with an update.

Each update adds exciting new features, adjusts the interface, and adapts to changes in the industry to make sure the latest versions are satisfying the needs of our users.

The latest version EventsAir is Version 15, and our latest version of OnAIR is Version 6. You can view details about each version update below, as well as information on past releases of EventsAir and OnAIR.
