

# Introducing AIRCast Studio Lite

Last Modified on 12/02/2021 10:57 pm EST

AIRCast Studio Lite is an alternate mode in AIRCast Studio and is designed for smaller events and those new to producing sessions in OnAIR.

When you are setting up a session, you will be able to select AIRCast Studio Lite Mode as an alternative to using the standard AIRCast Studio environment.

When you join the session as a host, your AIRCast Studio opens up to Lite Mode, allowing you to produce a professional session without the advanced tools such as PTZ camera control, remote projection, Interpretation services and whisper mode.

While these are all great tools for producing larger, multifaceted session broadcast, they are not necessary for smaller and simpler session formats.

With the limited tools and functions found in AIRCast Studio Lite, event professionals can easily produce a professional session broadcast with very little experience.
