Advanced Setup – Name Badge Editor

The Name Badge Editor is included in the Advanced Setup because setting up your name badges often involves pulling data from many different modules of EventsAir: Contact, Registrations, Functions, Presentations and more.

In addition to all your name badge style, color and format options, you can use the features of the badge editor to create unique badges that vary, based on information such as registration type, day of attendance, speaker or exhibitor status, function attendance, industry affiliation and much more.

There are separate guides on using the Name Badge Editor on this help site – please search "Name badge" for more information.
