

Version 15.1, SP 6 – July 9, 2024

Last Modified on 07/09/2024 8:41 pm EDT

The latest service pack includes improvements and bug fixes documented below.

For further information, please reach out to our support team [here](#).

IMPROVEMENTS

- New feature in OnAIR portal setup – Content – Sessions setup: Disable undocking. (This is because if an attendee 'undocks' their video in the OnAIR portal – moves it to a smaller, separate window – their browser would register that they'd left the session.) [Read more here](#).
- Initial upgrading of OnAIR analytics architecture as part of transition away from Microsoft Time Series Insights. This work will continue over the next couple of months.

RESOLVED

- OnAIR was sending additional, unnecessary data regarding each attendee's user journey in the portal, which was slowing down reporting. [REF: EA-6694]
