Can I change the font (in my websites, portals and apps)?

There are two options for setting up custom font files within EventsAir. Both are part of what we offer as additional quoted services so please talk to your account manage for more information.

1. **Hosting font files on an external server:** The font files are hosted on an external server which allows access using the correct CORS Policy. (This MUST be set up by the server Admin or the IT Admin of that external server, so is not something EventsAir can do on an external server.) Once we have the URL for the files, we can add this to a custom CSS file to apply the font to text within your sites, portals and/or apps (but not merge docs).

2. **Provide the font files to EventsAir:** We can set up hosting on our server and then set up the CSS files to apply to your sites and apps, in a similar way to the first setup.

Both options can include multiple font types (for example bold and italics versions).
