

# How do I add a QR code to a report?

Last Modified on 11/12/2024 4:39 am EST

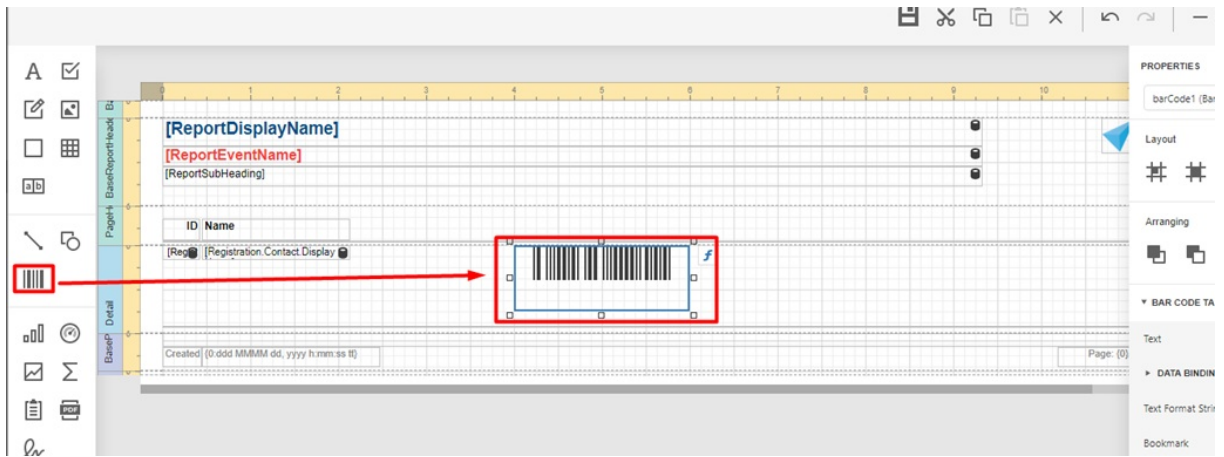

First, follow the usual steps for editing a report – find an appropriate existing report, copy it, and rename it, then select Edit.

You need to use a report that has a field called `id Guid` and another called `12 id`, listed under the `Contact` module in `Data Source`. Check for these under `Contact` in the `Field List` on the right when you start editing.

1. In the Report Designer/Report Editor, find the barcode icon on the left-hand side. Click and drag this into the report.

- Then, to connect this to your data so the report can find each person's QR code, select the *f* – function icon – to the top right of the barcode box.

- In the Expression Editor, look for Fields and expand the Contact section.

This may look different in each report as it could be under Registration, another module, or on its own.

The screenshot shows the Expression Editor interface. On the left, a list of properties is visible, with 'Text' selected. The main area displays a report item labeled '1'. Below this, the 'Report Items' pane is open, showing a tree view of report items. The 'Fields' item is selected under 'Registration', and the 'Contact' item is selected under 'Contact'. The 'Contact' item is expanded, showing sub-items: 'Billing Details', 'Custom Fields', 'Primary Address', and 'Secondary Address'. At the bottom right, there are three buttons: 'Save', 'Cancel', and 'Apply'.

4. Search for the Fields labeled **id** Guid and **12** ID as shown below (note there is also a field called **ab** id – don't choose that one).

5. Double-click the field called 12 ID. It will be added to your expression, and should look something like this.

### Expression Editor

Accessible Description
1

[Registration.Contact.ID]

6. Add the text '+' into the expression editor so it looks something like the below:

### Expression Editor

Accessible Description
✕ 1

[Registration.Contact.ID]+' , '+'

7. Add the id Guid field to the expression by double-clicking it so it looks something like the below.

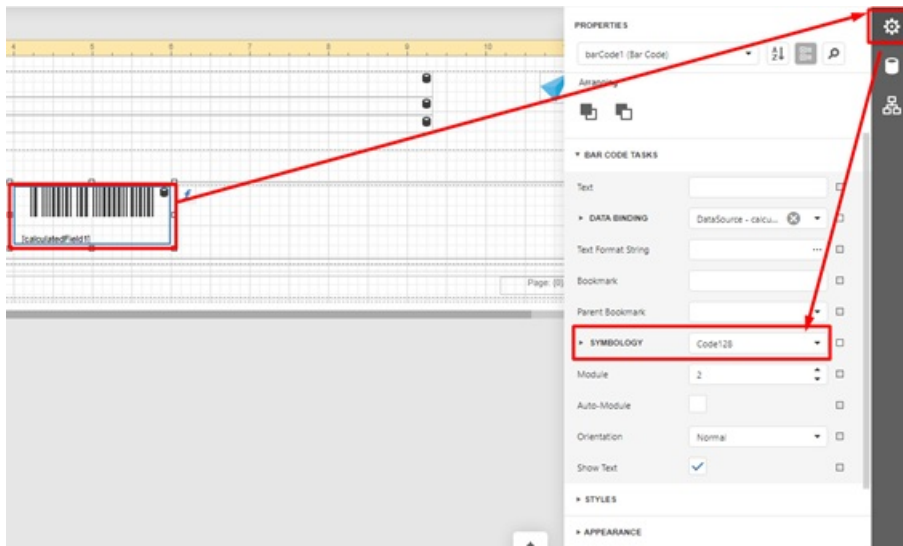

Remember to select "Apply" before you close the Expression Editor, and the Save (disk) icon in the Report Editor before you close it.

8. Back in the Report Designer, select the Barcode box. You should already see the Settings menu, but if not, click the cog icon.

Expand the heading **Symbology** (by selecting the arrow to the left of the heading). There will be box with something like "Code xxx" – a number.

9. Change the **Symbology** field to "QR Code" by finding it in the dropdown menu. You'll also need to set the **Compaction Mode** to "Byte" by finding it in the drop down, then tick the "Auto-module" checkbox.

10. Be sure to save before you exit the report editor. When you run the report, each attendee's QR code will be shown.
