

# What text can I put on my websites to let attendees know about PCI Compliance (security of credit card details)?

Last Modified on 11/25/2024 4:46 am EST

PCI Compliance (Payment card industry compliance) standards (technical and operational) are designed to secure and protect credit card data. These standards are developed and managed by the PCI Security Standards Council.

Below is an example of text you can use on your EventsAIR interactive sites to provide assurance about credit card security to attendees:

*Our website service provider Centium Software is Level 1 PCI-DSS compliant and your cardholder data is protected to the highest possible standards.*
