

How can I hide published pages on my event website?

Last Modified on 12/11/2024 11:06 pm EST

HOW-TO:

*This article is about hiding pages on your **event website**. For information about interactive (registration) sites, please refer to other articles about interactive sites.*

 The steps below hide a page and any links to the page from within an event website. To show them again, uncheck *Draft Only*.

Online Panel

1. Under *Event website* select edit
2. Select the cog icon on any page that you want to hide while you make changes
3. Select the *Advanced* tab
4. Check the *Draft only* box
5. Select Update
6. Select *Save & Publish*

 You could also select *Save & Preview*, however this would only change the separate URL which is the preview version of the event website, whereas *Save & Publish* makes changes live on the event website itself.
